

## KNEKT wiring (Rev 2)

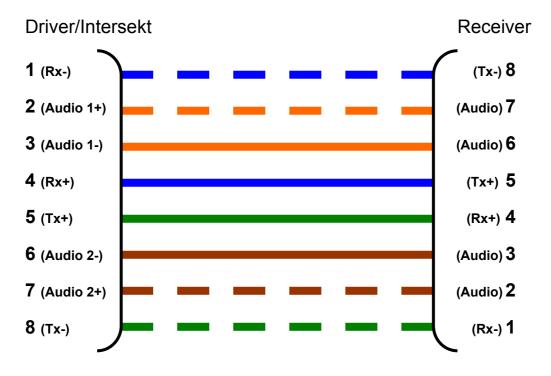

**Important.** This document supersedes the previous revision. Rev 1 showed diagrams of wired sockets and, unfortunately, these could be lead to confusion since not all sockets share the same pin configuration.

Please ignore any colour-coding advice shown on the socket or supplied with the socket and simply follow the numbering, as detailed below, to ensure correct connection.

## Plug-to-plug connection or Socket-to-socket connection

(i.e. like-to-like)

Connect as shown in the wiring diagram below. This type of connection (pin  $1 \rightarrow$  pin 8 etc.) is known as 'twisting' the cable.

## Plug-to-socket connection or Socket-to-plug connection

Do not 'twist' the cable as above. Use a direct  $(1 \rightarrow 1; 8 \rightarrow 8 \text{ etc.})$  configuration.
