

KEY FEATURES INCLUDE

Up to 500 hours of uncompressed audio storage capacity

Full bandwidth CD quality audio playback

Designed and engineered for simpler distributed audio applications

Concurrent access by up to 8 users

I Simple set up and control via LINNTEK PC utility

Powered by REKURSIV – versatile and robust music management software

Fast music access time and improved track transition

Interface with Linn KNEKT system via LINNK

I Third party control via RS 232 and Ethernet.

Available in two finishes – black or silver

The Linn KIVOR INDEX is a pitch accurate, concurrent, archive and retrieval music library capable of storing and accessing up to 500 hours of uncompressed, CD quality audio. It is designed and engineered for simpler distributed audio applications whilst still performing to the high standards that Linn customers demand.

The KIVOR INDEX enables up to eight users to have concurrent access to high quality, full bandwidth music distributed via a multi-room audio system or as a hard disc source component in any audio system. The KIVOR INDEX eliminates quality and reliability problems associated with conventional CD multi-changers and inferior hard disc storage systems

Music is loaded onto the KIVOR INDEX via its integral CD ROM drive. A built-in modem connects to the Internet and downloads artist, track and title information for control and manipulation on LINNTEK, our PC set up and control utility. When used with the KIVOR LINNK control interface, two-way communication with the KNEKT multi-room audio system is also possible

System management is carried out by REKURSIV, Linn's robust and versatile software platform, designed for integrity of music storage in hostile environments and demanding multi-room applications. Internal fan cooling ensures efficient, maintenance free operation whilst a black or silver rack mountable fascia permits discrete installation.

The KIVOR INDEX is available with either 250 hours or 500 hours of uncompressed audio storage and is backed by Linn, a manufacturer renown for reliability, service and value, worldwide.

KIVOR INDEX

SPECIFICATION

A simple, high performance music library

KIVOR INDEX

TECHNICAL SPECIFICATION

A simple, high performance music library

Introduced 2002

Type Hard disc based music archival, retrieval

and playback system

Storage capacity 250 hours or 500 hours uncompressed,

full bandwidth audio, specified at point

of purchase

Audio outputs Eight pairs of line level outputs for connection

to Linn INTERSEKT or other audio distribution

pre-amplifier.

Connections Audio – 8 stereo pairs of phono outputs

COM1/COM2- D-type for RS 232 connectivity

Modem – RJ11 Ethernet – RJ45

Mains supply 85 - 130 Vac T800mA, 180 - 264 Vac T800mA

Typical heat output 60 Watts

Dimensions H 177mm x W 482mm x D 505mm

H 6.97 inches x W 19 inches x D 19.9 inches

Rack height 4u

Weight 13kg/28.6lbsFinishes Black and Silver

Linn Part Nos. INDEX/D2 – Black Fascia, 250 hours

INDEX/D4 – Black Fascia, 500 hours INDEX/S/D2 – Silver Fascia, 250 hours INDEX/S/D4 – Silver Fascia, 500 hours
